

# INSTALLATION AND MAINTENANCE GUIDE

Medford Technologies

Applies to: Bluvia Neo

Effective Date: October 4, 2025

This Appendix outlines the mandatory procedures and responsibilities for the proper installation, commissioning, and ongoing maintenance of Medford Technologies' Equipment, forming an integral part of the main Terms and Conditions.

## SECTION I: EQUIPMENT INSTALLATION AND COMMISSIONING

### 1. Customer Site Readiness (Pre-requisites)

The Customer is solely responsible for ensuring the installation site meets all pre-installation requirements as detailed in the technical specification document (**Medford Spec Sheet**) prior to the scheduled installation date. Pre-requisites include, but are not limited to:

- **Structural & Space:** Adequate floor loading capacity, specified clearance for access and ventilation.
- **Utilities:** Stable, dedicated electrical supply (voltage and amperage as specified), clean dry air (CDA) supply, and appropriate venting or abatement systems.
- **Environmental Control:** Temperature, humidity, and particulate controls that comply with the Equipment's operating range and the Customer's QMS requirements.
- **Safety:** Compliance with all local fire and safety codes for the operation of sterilization equipment.

### 2. Installation Qualification (IQ)

Medford's certified technicians will perform the IQ, which includes:

- Verification that the Equipment has been delivered and installed correctly in the prepared environment.
- Documentation that all critical utilities (power, pressure, venting) are connected and within the specified operating range.
- Verification of all safety mechanisms.

### 3. Operational Qualification (OQ)

Medford will perform the OQ to confirm that the Equipment operates consistently across its specified operating ranges.

- This includes running pre-defined, controlled test cycles to demonstrate that the Equipment's controls (e.g., temperature, pressure, time) function according to the

factory specifications.

- Successful completion of the OQ results in the issuance of a formal **Medford Certificate of Installation and Operational Qualification**.

#### 4. Training and Handoff

Upon successful OQ, Medford will provide comprehensive operational and safety training for a designated number of the Customer's personnel. **Only personnel certified by Medford** are authorized to operate or perform internal, non-warranty maintenance on the Equipment.

## SECTION II: MANDATORY MAINTENANCE AND SUPPORT

#### 5. Preventive Maintenance (PM)

To maintain the Equipment warranty and ensure regulatory compliance, the Customer must adhere to Medford's mandatory PM schedule, detailed in the Equipment User Manual.

- **Required PM Frequency:** Dependent on Equipment usage, but typically requiring a **Semi-Annual (2)** or **Annual (1)** visit by a Medford-certified technician.
- **PM Service Contract:** The purchase of a Medford PM Service Contract is strongly recommended to guarantee timely service and access to genuine replacement parts. Failure to perform mandatory PM may void the Limited Warranty (Article 7 of T&C).

#### 6. Corrective Maintenance and Service Requests

- **Service Level Agreement (SLA):** Response times for Corrective Maintenance are governed by the Customer's specific Support Contract tier. Standard response is next-business-day remote diagnostic support.
- **Non-Medford Repairs:** Any attempt by non-Medford personnel to service, modify, or repair the internal workings of the Equipment will immediately and permanently **void all warranties and relieve Medford of all liability** related to the Equipment's performance or any resulting damage.

#### 7. Spare Parts Policy

- **Genuine Parts Mandate:** The Customer is required to use **only Genuine Medford Replacement Parts** for all repairs and scheduled part replacements. The use of non-OEM parts will void the warranty and may compromise the integrity of the sterilization process.
- **Parts Availability:** Medford maintains a stock of critical spare parts. Customers with an active PM Service Contract are given priority access and discounted pricing on all replacement parts.
