

COMPLIANCE GUIDELINES

Medford Technologies Pvt Ltd
Effective Date: October 4, 2025

1. STATEMENT OF PRINCIPLE

Medford Technologies is dedicated to the highest standards of quality and regulatory adherence in the medical technology sector. Our Equipment and Services are designed to function within rigorous, controlled quality management systems (QMS). However, the **Customer is the ultimate Legal Manufacturer** of their medical device (including prototypes) and bears full, non-delegable responsibility for its regulatory approval, safety, and effectiveness.

2. APPLICABLE REGULATORY FRAMEWORKS

The Customer must ensure compliance with, but not be limited to, the following regulatory and quality standards:

- **Global Quality Standards: ISO 13485** (Quality management systems for medical devices).
- **Sterilization Standards:** Specific sterilization validation standards, such as those within the **ISO 15883** standard that defines the **performance and testing requirements for washer-disinfectors**..

3. RESPONSIBILITY ALLOCATION

Area of Responsibility	Customer Responsibility	Medford Responsibility
Medical Device Classification	Solely responsible for classification (I, II, III), pre-market submission, and registration.	None.
Sterilization Validation	Solely responsible for qualifying and validating the specific sterilization cycle for their device	To provide technical specifications, IQ/OQ (Installation/Operational Qualification) documentation for the Equipment, and a qualified/calibrated machine.
Prototype Handling Risk	Solely responsible for risk assessment of prototype exposure to the sterilization environment.	To follow agreed-upon handling procedures (SOPs) detailed in the Service Contract.

Post-Market Surveillance	Solely responsible for device complaint handling, adverse event reporting, and recalls.	To provide Equipment performance data upon request to support Customer investigations.
Site Quality Management	To implement and maintain a compliant QMS at the Equipment installation site, including trained personnel, environmental control, and deviation procedures.	To maintain an ISO 13485-compliant QMS for the design, manufacturing, and servicing of the Equipment itself.

4. AUDIT SUPPORT AND DATA TRACEABILITY

4.1. Access and Cooperation. The Customer agrees that Medford's internal records pertaining to the manufacture, service, and maintenance history of the specific Equipment or the execution of Services provided to the Customer may be subject to audit review by regulatory bodies (e.g., FDA, Notified Bodies) overseeing the Customer. The Customer shall provide reasonable notice for any required audit access to Medford's records.

4.2. Operational Data Traceability. The Customer must maintain a system for linking the unique Equipment Operational Data (cycle logs, temperature, pressure readings) provided by Medford's system to the specific batch and serial numbers of the Customer's sterilized devices. This linkage is critical for regulatory traceability.

5. NON-COMPLIANCE AND INDEMNITY

Any failure by the Customer to comply with regulatory requirements or the usage guidelines specified by Medford shall constitute a material breach of the Agreement. The Customer shall indemnify Medford for any regulatory fine, penalty, or liability incurred by Medford arising from the Customer's regulatory non-compliance.
